STEP BY STEP TUTORIAL ON HOW TO BUY A UNITED FOR UKRAINE NFT

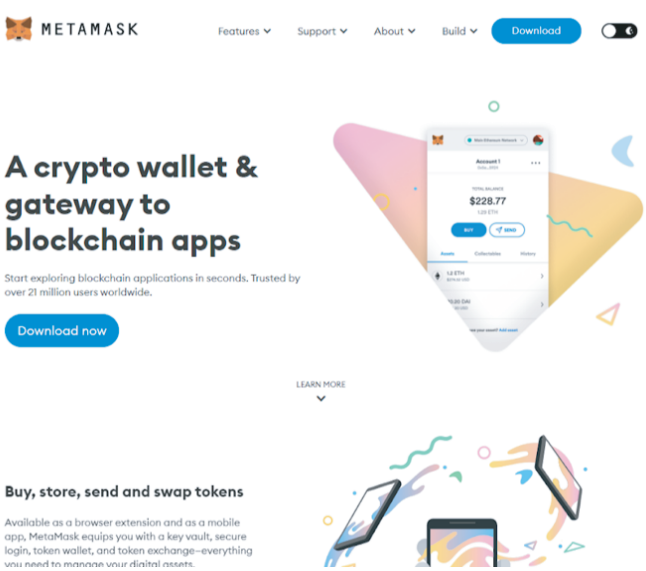
UNITED FOR UKRAINE NFT

CHAPTER 1: CREATING A WALLET IN METAMASK

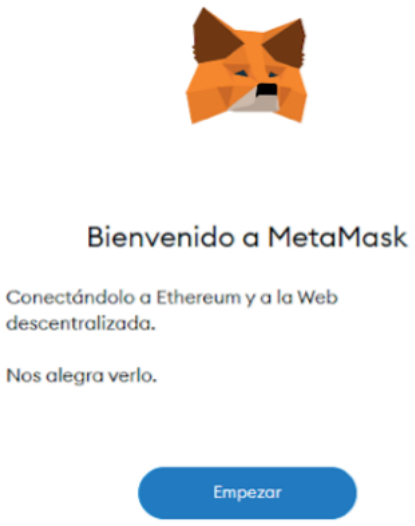
Step 1 : Download Metamask in your web browser at:

https://metamask.io/

(Supported browsers: Google Chrome, Edge, Firefox and Brave)

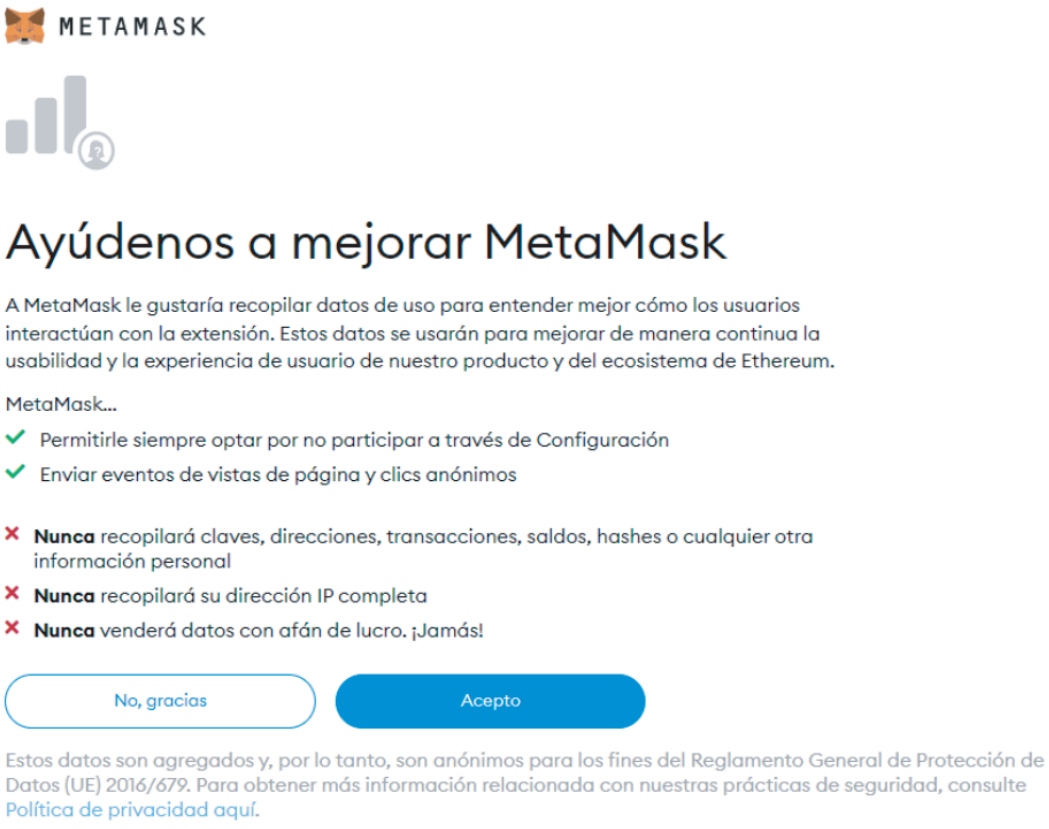


Step 2 : A window like the following will open, press start.

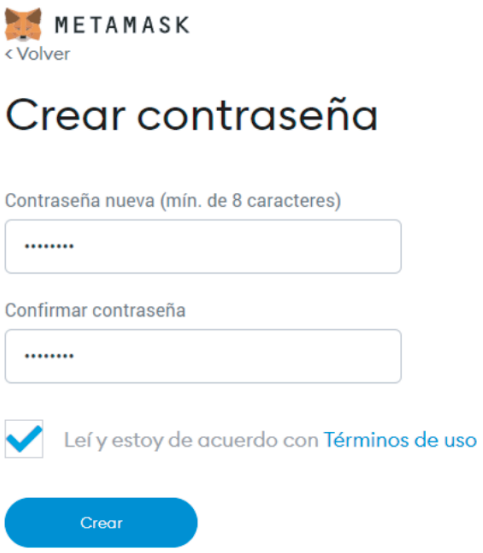


Step 3 : It will ask you to import an existing wallet or create a new one, in our case we will create a new one.

Step 4 : Accept the privacy policy.



Step 5 : Create a password (minimum 8 characters). Click on Create.



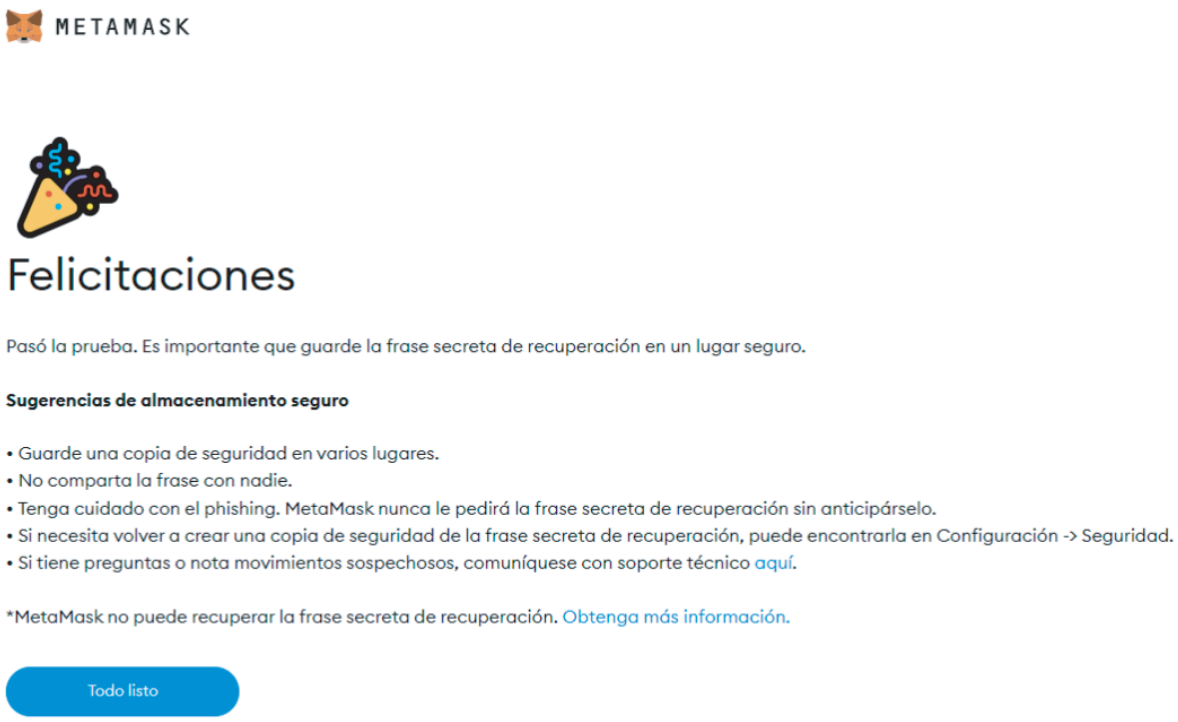
Step 6 : A video will appear explaining the importance of the security phrase. Click on next.

Step 7 : Our security phrase for our wallet will be generated. This will help us to protect our wallet and to import it on other devices. Click on reveal and save the phrase in a safe place. (Recommended to save the phrase on a paper)

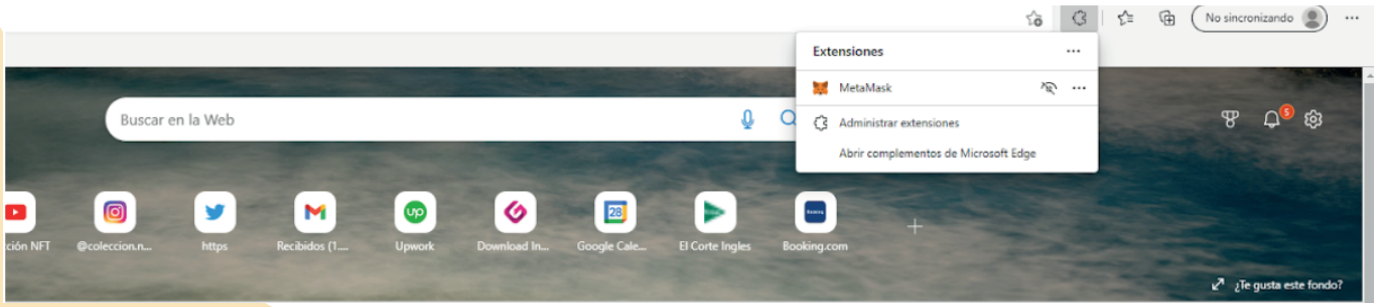
Step 8 : We will have to enter the exact order of the words of our security phrase.

UNITED FOR UKRAINE NFT

Step 9 : Once the security phrase has been confirmed, we will have finished creating our wallet. Click on ready.



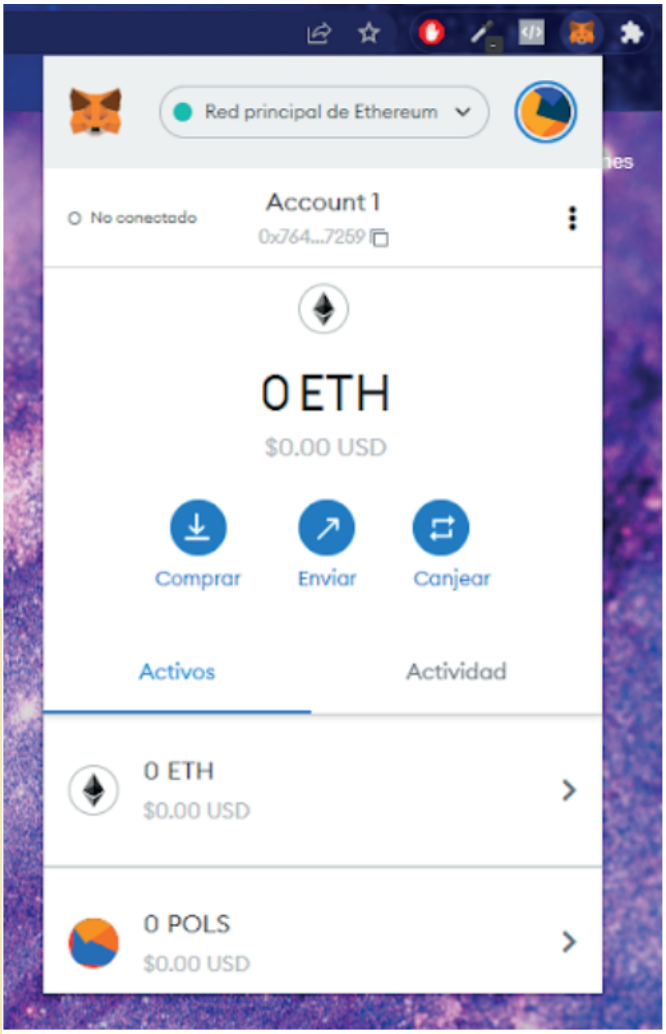
MetaMask will appear in the upper right corner of our browser to open it whenever we want.

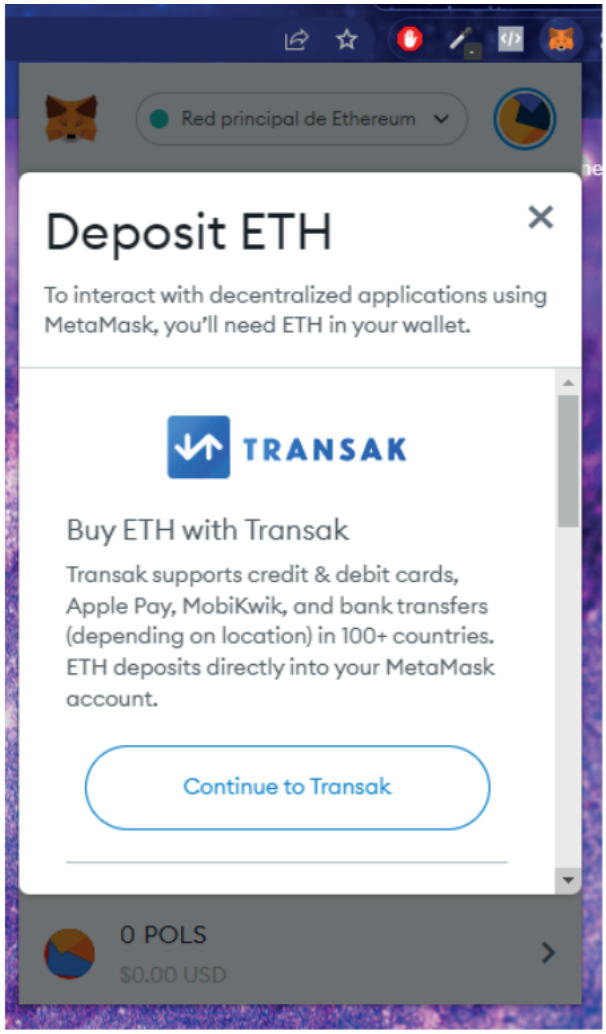


CHAPTER 2: HOW TO BUY AN NFT OF UNITED FOR UKRAINE

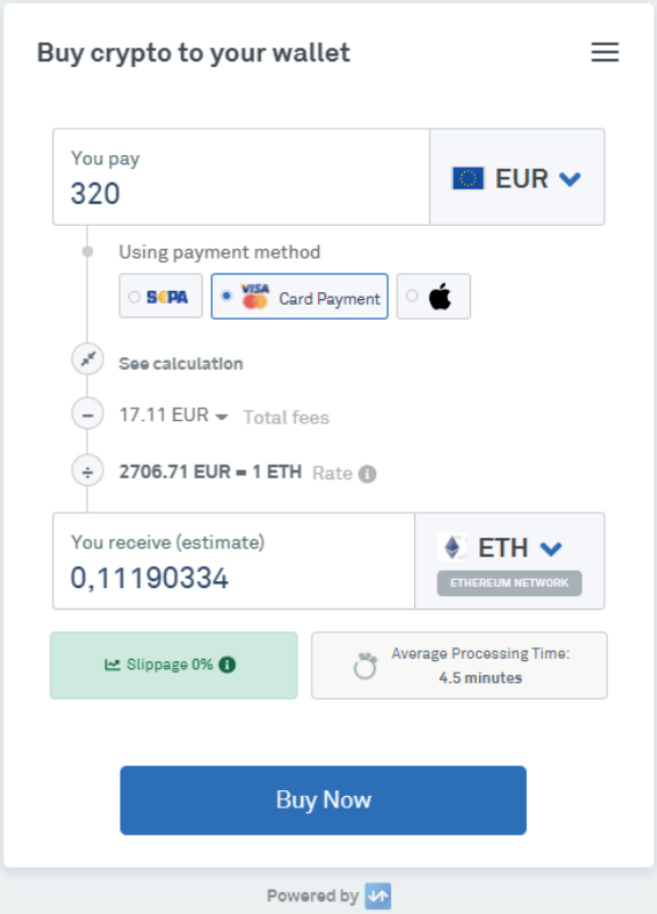
Option 1 : Purchase with a credit card

Step 1 : Open your MetaMask wallet in your browser and click on the blue button “Buy”. A small box will open where we will get different options. We will choose Transak, click on the “Continue to Transak” button.

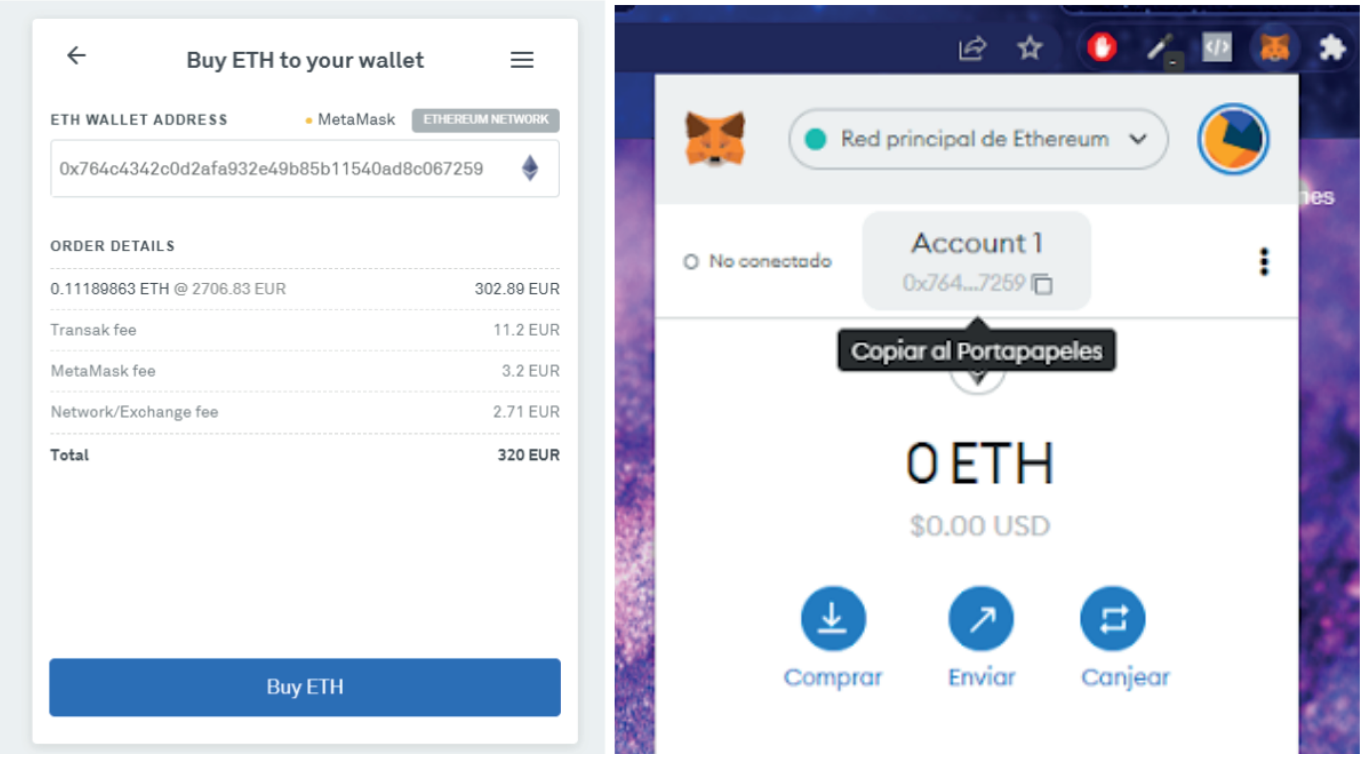




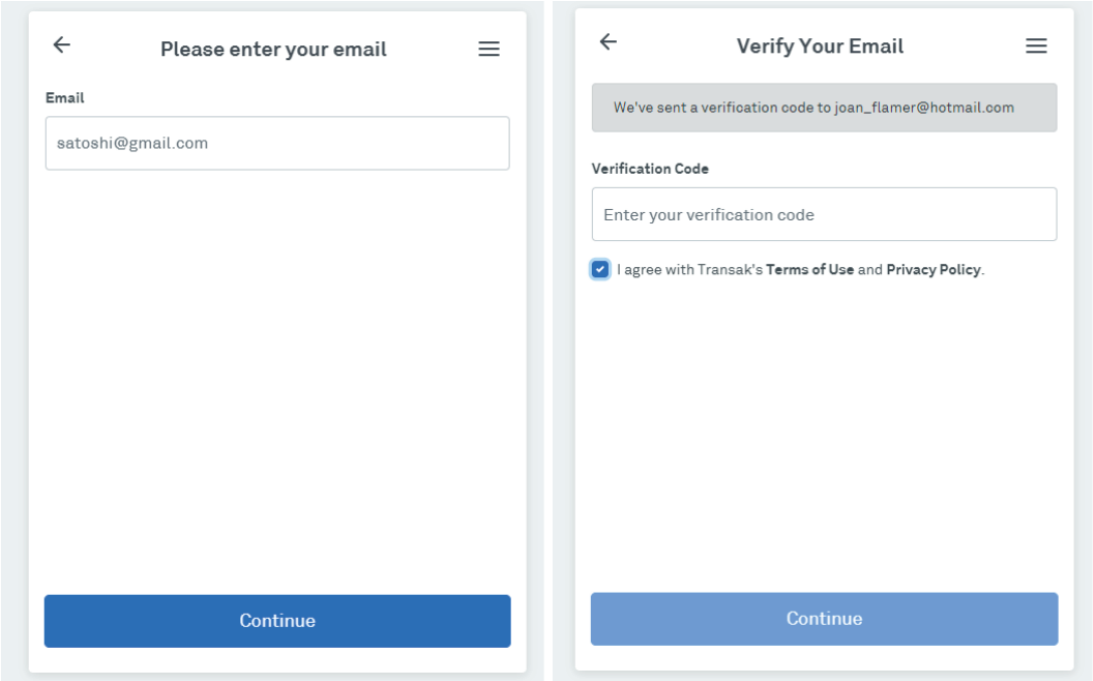
Step 2 : A new tab will open with the ETH purchase process. Payment options are bank transfer, credit card and Apple Pay. In our case, we will choose the credit card option. If you want the piece of 0.1 ETH, you must enter enough money in the EUR field so that it gives you a little more than 0.1 ETH to be able to assume the costs of the gas fee (the commission that the network will charge us for buying the NFT). Once you have selected everything correctly, click on the “Buy Now” button.



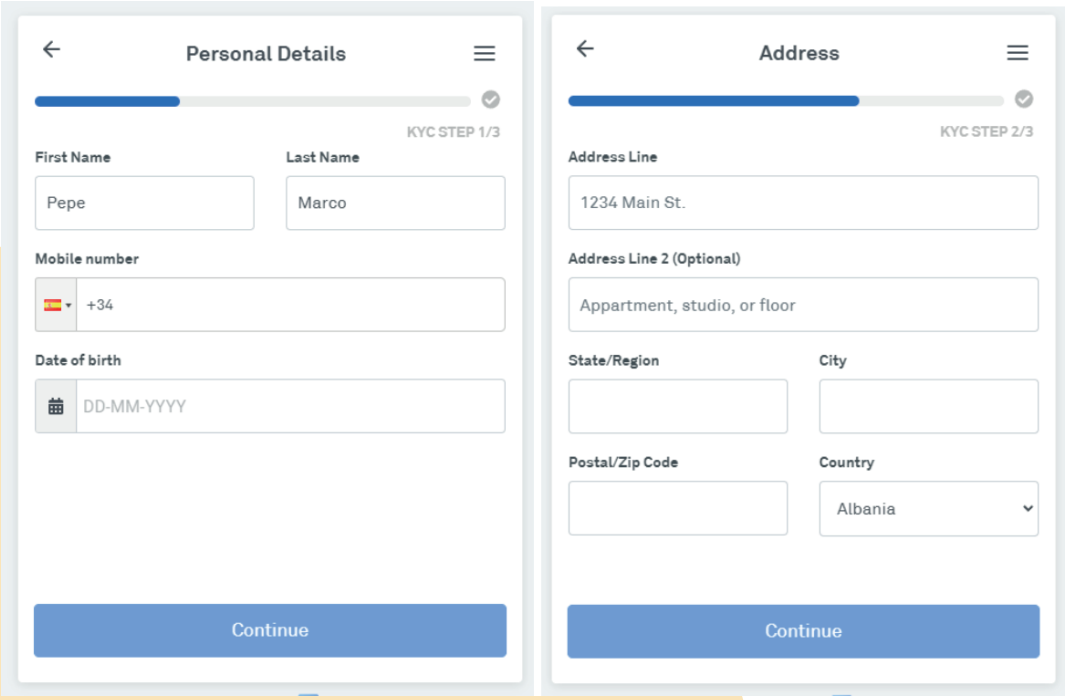
Step 3 : The next thing that will appear is our MetaMask ETH wallet address and transaction details. If your ETH address does not appear automatically, in your MetaMask wallet you can copy the address by clicking on the number that appears just above (Make sure you have selected the Ethereum network). Verify that everything is fine and click on the “Buy ETH” button.



Step 4 : The next step will be to enter our email to receive a verification code. Once you receive the code, enter it, accept Transak's policies and click on the "Continue" button.



Step 5 : Finally, you will only have to enter the data of your credit card in Transak and you will be able to proceed with the purchase of ETH. Once the transaction is made, it will take between 4-5 minutes for the ETH to reach your Metamask wallet, depending on how congested the network is, it may be something else.



UNITED FOR UKRAINE NFT

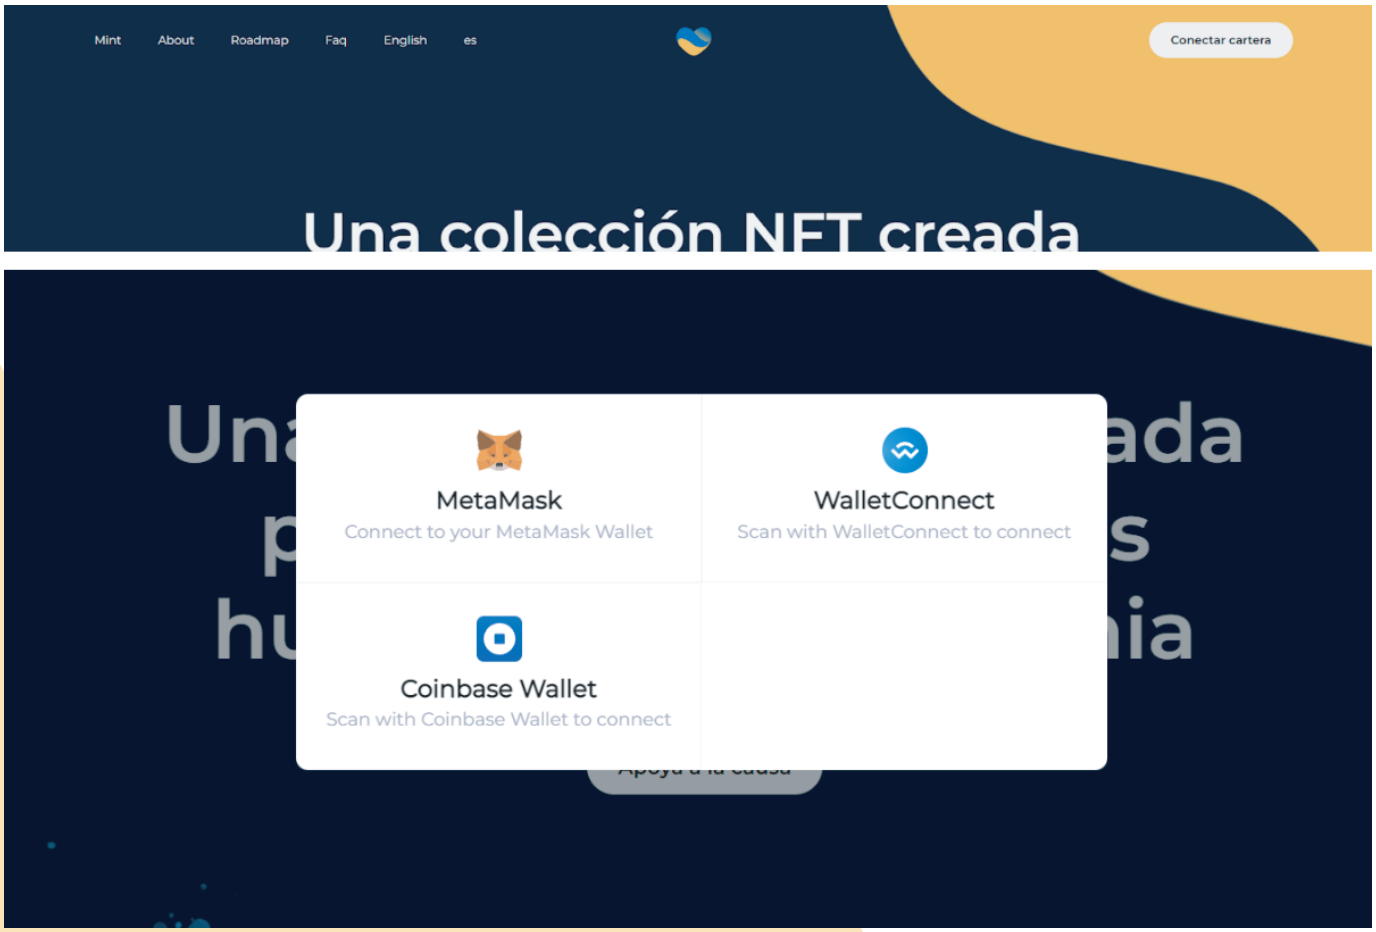
When the funds have been deposited in your MetaMask wallet, you will receive an email confirming that it has been completed successfully. You can verify that your funds have been deposited by clicking on the Metamask icon.

Once you have everything ready, you can go on to option 2.

Option 2 : Purchase with cryptocurrencies

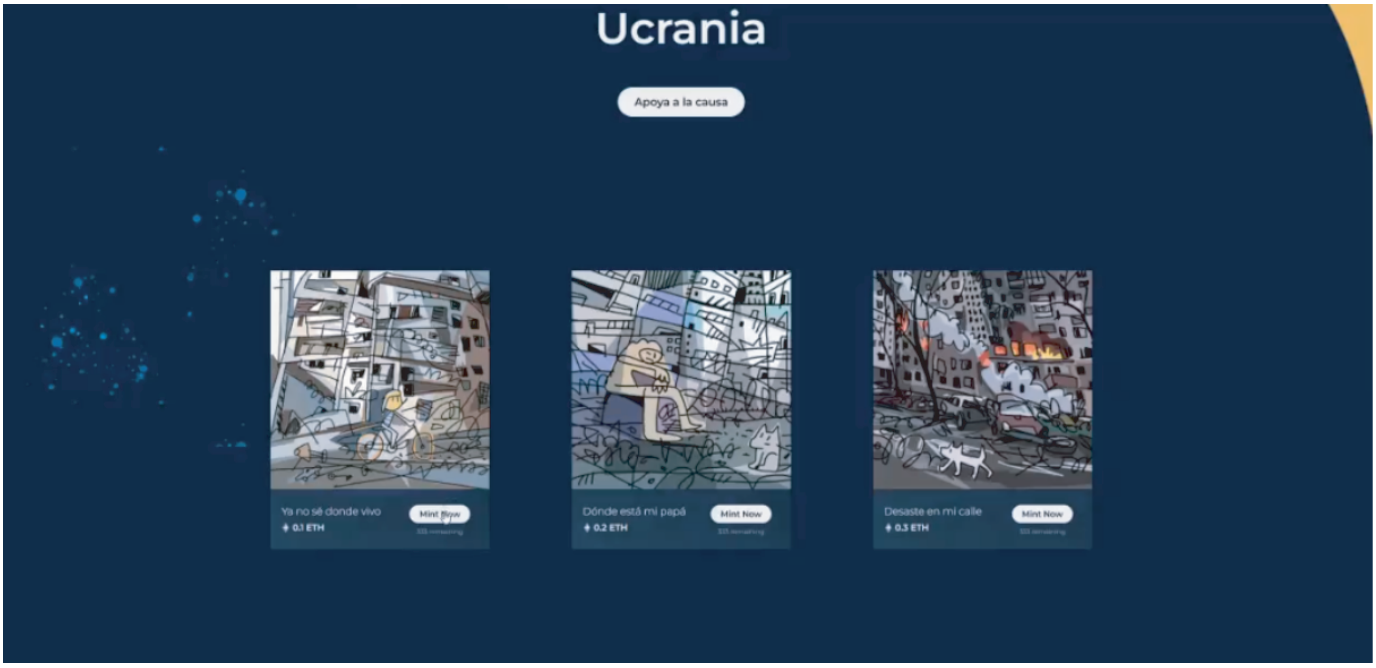
Step 1 : Go to the unitedforukrainenft.com website

Step 2 : Connect your wallet to the website.



Step 3 : Sign with your wallet to give permissions to the website to be able to connect it and be able to buy your NFT.

Step 4 : Once your wallet is connected, go down a bit and the 3 pieces will appear. Choose the piece that you want and click on the “Mint now” button (If we do not have enough ETH or we are not on the correct network, an error message will appear).

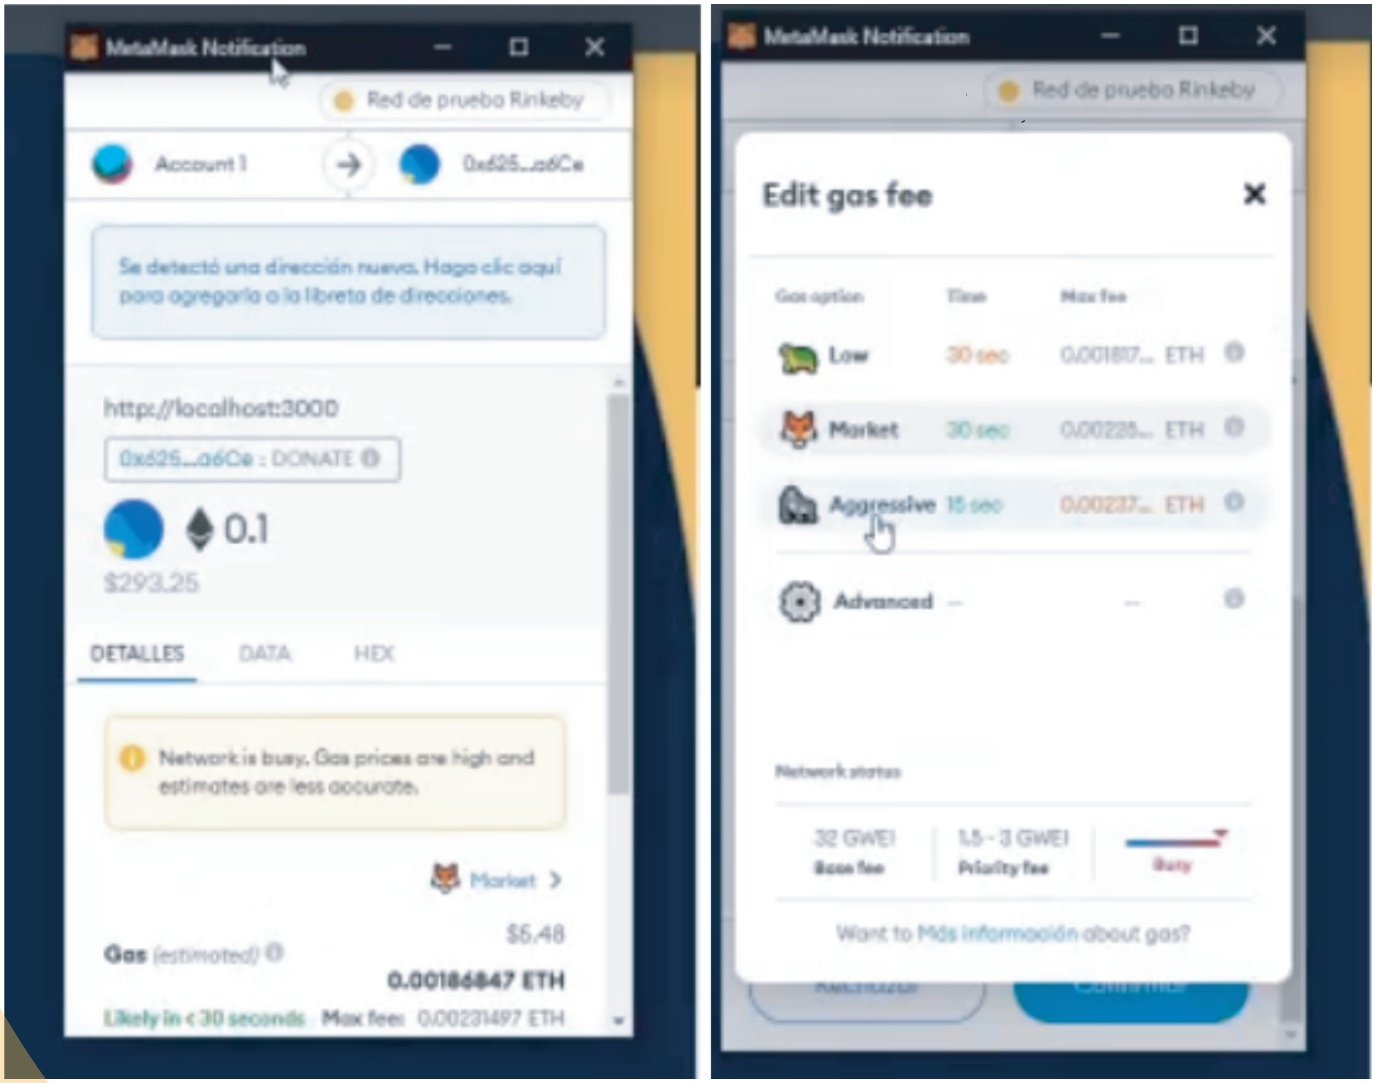


Step 5 : Immediately, the Metamask wallet will be opened. Where it says “Market” with the emoticon of a fox, we can modify the “Gas Fee”, which is the commission that we will be charged for buying an NFT. Depending on the Gas Fee we choose, the mining of the NFT will be faster or slower.

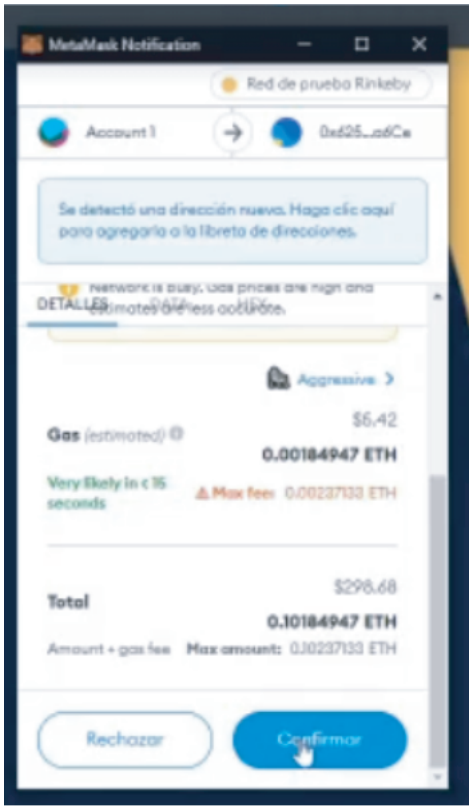
We will have 3 options:

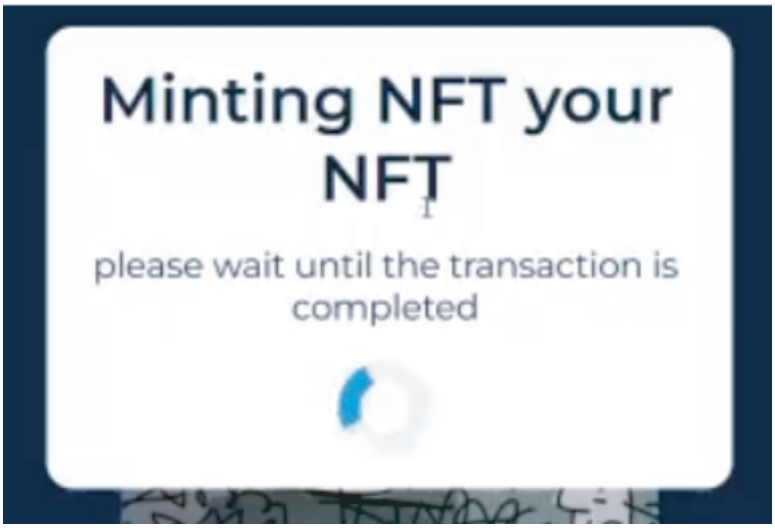
Low: The slowest option but the cheapest.
Market: The middle option.
Aggressive: The fastest option but the most expensive.

We must choose the one we want. We recommend that you choose the Low option, since there will not be as much traffic.



Step 6 : Once we have chosen the type of gas, we must click on confirm. We will get a box indicating that our NFT is being minted and we will have to wait for the transaction to be completed. Depending on how congested the network is, it may take some minutes.





Step 7 : Once the transaction is completed, we will get the hash of the transaction, which is a code that we can put in Etherscan to see the transaction process and verify that it has been carried out correctly. An option will also appear below to see our NFT in the Opensea marketplace.
